No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
CC AAY73325-Y73389 are human transcriptional regulator molecule (HTRM) CC for preventing or treating disorders associated with decreased expression CC or activity of HTRM which include cell proliferative disorders such as CC arteriosclerosis and cirrhosis; cancers including adenocarchoma and Cleukaemia; immune disorders such as AIDS, Addison's disease, diabetes CC mellitus, rheumatoid arthritis, multiple sclerosis, systemic lupus CC erythematosus, and myasthenia gravis; infections and trauma. Antagonists CC of the HTRM polypeptides are useful for treating or preventing disorders CC associated with increased expression or activity of HTRMs. HTRM CC polypeptides, their immunogenic fragments or oligopeptides are useful CC for screening libraries of compounds in drug screening techniques. CC Polynucleotides encoding HTRM are useful for blocking the transcription of mRNA and regulating gene function by modulating the activity of HTRMs. Pectors expressing HTRM or agonists can also be used to prevent or treat disorder associated with decreased HTRM expression. Antibodies which specifically bind HTRM and polynucleotides encoding HTRM are useful for diagnosing disorders associated with the expression of HTRM. Nucleotide Sequences encoding HTRM may be useful to generate hybridization probes CC differences in gene sequences among normal, carrier and affected CC differences in gene sequences among normal, carrier and affected CC the appearance of clinical symptoms and thereby progression of cancer can be prevented by aggressive treatment or preventive measures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

PRO polypeptides, and to detect the presence of mammalian lung, colon, cc breast, prostate, rectal, cervical or liver tumours by comparing PRO polypeptide expression in a cell sample to that in a control sample. CC some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha ("NP-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or correct cells, the release of proteoglycans from cc cartilage, the proliferation of inner ear utricular supporting cells or cartilage, the proliferation of finner ear utricular supporting cells or cof T-lymphocytes, the release of a cytokine from peripheral blood composites (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polynucleotides encoding

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               23 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheimer's disease, parkinson's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, cardiovascular disorders, angiogenic disorders, kidney disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAD08283-AAD08355 represent cDNAs corresponding to 23 human secreted protein genes, and AAB03810-AAB03870 represent the proteins they encode. AAB03871-AAB03870 represent the proteins they encode. The secreted proteins and their genes are useful for preventing, the treating or ameliorating medical conditions, e.g., by protein or gene therapy, Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated nucleic acid molecule encoding a human secreted protein used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N-PSDB; AAD08286
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gastrointestinal disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 11; Page 482-483; 553pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             immunosorbent assay (ELISA). The psecreted protein of the invention.

The protein is useful for treating a condition mediated by protease T. It is useful for treating an imbalance of desquamation, by topical application of a pharmaceutical composition containing the protease. The composition is useful as a topical skin care composition. It is useful as a laundry detergent, shampoo, hard surface cleaning composition, and dish care cleaning composition. Protease T protein is useful for treating and preventing skin flaking. It is less immunogenic to sensitive individuals and it provides efficient proteolytic activity in a non-natural

immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
                                          assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.

      The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune System suppression, Activin/Inhibin activity, Chemotactic/Chemokinetic activity, Deemostatic
                                                                                                                                                                                                                                                                                                        Tang YT,

HELA2 was isolated from HeLa cells, and has chomology to serine proteases. The protein is involved in or associated with regulation of cell activity and/or viability. Administration of recombinant HELA2 (also called testisin) is used to increase fertility. Downregulation of HELA2 reduces fertility. HELA2 is also a suppressor of testicular germ cell cancers (seminoma) and is also expressed in some non-testicular cancers (of colon, pancreas, prostate and ovary), so is a marker/potential therapeutic target for cancer. The promoter from the HELA2 gene is useful for testis-specific expression of other genes, e.g. for gene therapy or modulation of fertility. Drugs that block activity of HELA2 should have antitumour activity (other than in testis recombinant HELA2 should stop growth of tumours and normalise sperm development (eliminating the need for orchidectomy). Identification of mutant forms of HELA2 can be used to diagnose
                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

Protease T is useful for treating a condition mediated by protease T. It is useful for treating an imbalance of desquamation, by topical application of a pharmaceutical composition containing the protease. The composition is useful as a topical skin care composition. It is useful as a laundry detergent, shampoo, hard surface cleaning composition, and dish care cleaning composition. Protease T protein is useful for treating and preventing skin flaking. It is less immunogenic to sensitive individuals and it provides efficient proteolytic activity in a non-natural

                                                                                                                                                                                                                                      This polypeptide, termed HE2NW40, comprises a serine protease that that shows homology to human tryptase. Its amino acis sequence was deduced from an isolated cDNA clone (see AAX06942). HE2NW40 polypeptides and polypucleotides are useful for diagnosing diseases related to over or underexpression of HE2NW40 protein by identifying mutations in the HE2NW40 gene, and/or analysing the presence or amount of expressed polypeptide (claimed). HE2NW40 polypeptides, olypucleotides (gene therapy), antisense sequences, agonists and intagonists, and soluble polypeptides that bind the HE2NW40 ligand to prevent expression, can be used to modulate HE2NW40 expression or activity. Diseases diagnosed, prevented or treated include cancer, inflammation, asthma, wasting diseases, atherosclerosis, or activity, diseases diagnosed, prevented or treated include cancer, inflammation, asthma, wasting diseases, atherosclerosis, of disorders including Alzheimer's disease. HE2NW40 antibodies are cuseful for inducing an immune response to immunise and prevent cuseful for inducing an immune response to immunise and prevent consequences, and for isolating HE2NW40 clones or purifying the polypeptide by affinity chromatography. HE2NW40 polypeptides can disease administered directly or as a vaccine to inoculate against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAW88453

This sequence represents human PRO343 (UNQ302), a protein encoded by the novel cDNA clone DNA43318 (see AAX87259). Amplification of DNA43318 was observed in primary lung tumours and in primary colon tumours, suggesting a significant role in tumour formation and growth. Antagonists (e.g. antibodies) directed to PRO343 may have use in cancer tharapy. The invention identifies 14 genes (see AAX87254-67) that are amplified in the genome of tumour cells. Such amplification is expected to be associated with overexpression of the gene product and to contribute to tumorigenesis. The encoded proteins (see AAX06477-90) may be useful targets for the diagnosis
                                                                                                                                                                                                             WPI; 1999-430385/36.
